

Our Hotel Process

Hotels are searching for ways to enhance Guest Experience and also keep their rooms quiet. A new smart way to do this is with Quietyme's room monitors. Temperature, Humidity, Noise and Light.

What you need:

A proactive and inexpensive way to handle noise complaints and other environmental issues in your building.

STEP
01

The Solution

We have smart sensors for just Ten cents per day to monitor noise, temperature, humidity and light levels.

STEP
02

The Install

Some info needed: How many rooms and what type of internet connection do you have? From there we go room by room and plug in our sensors. They all connect to our main hub. We'll work with your IT staff if needed.

Instant alerts
Know before your guests when there is a disturbance

STEP
03

It's Live

Your system is now up with all sensors talking to each other and the main hub. Your range levels are set by you with our staff to assist you along the way.

STEP
04

Guest Experience

Alerts are sent to your front desk when there is a problem. Staff can act right away and save your reputation and money.
